1. Executive summary

The aim of this publication is to report on the local Sustainable Energy Action Plans (SEAPs) developed and formally approved within the 50000&1 SEAPs project, as well as to give access to these documents by providing relevant links or attaching complete SEAP file (in case no link is available).

The 50000&1 SEAPs project helped over 40 municipalities in assessing their initial energy situation and planning actions aiming at improving this situation. These actions have been included in structured and comprehensive action plans, which describe them in detail and evaluate their impact on energy consumption, RES production and GHG emissions. Following CoM methodology, once developed, the SEAP needs to be formally approved by municipal council to ensure high-level support and commitment for its implementation. Formally adopted SEAPs are then submitted to the Covenant of Mayors Office and subjected to the verification process, where their compliance with CoM requirements is checked.

50000&1 SEAPs consortium supported pilot municipalities in all stages of the SEAP development process, including ensuring high-level political commitment and submission of the plans to the CoMO. They also helped to ensure SEAPs integration with energy management systems following ISO 50001 to create synergies between the two approaches.

2. Collection of SEAPs

Below there is a list of SEAPs developed within the project with their status and link to the document.

Table 1: Status of SEAPs development with links to already existing/approved documents (per country)
